
DATASHEET APPH Specification v1.25

Signal Source Analyzer from 1 MHz to 7, 26 and 40 GHz

DEFINITIONS

The specifications in the following pages describe the warranted performance of the instrument for 23 ±5 °C after a 30-minute warm-up period (unless otherwise stated).

Min/Max: Parameter range that is guaranteed by product design, and/or production tested. Warranted performance specifications include guard-bands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions.

Typical: Expected mean values, not warranted performance.

INTRODUCTION

Fully integrated cross-correlation signal source analyzer for 1 MHz to 7, 26, and 40 GHz

The APPH is an integrated solution that offers an indispensable set of measurement functions for evaluating signal sources ranging from VHF to microwave frequencies such as crystal oscillators, PLL synthesizers, clocks, phase-locked or free-running VCOs, DROs, SAW or YIG oscillators, and others.

The flexible instrument comprises a two-channel cross-correlation system with two internal tuneable reference sources and also allows measurements with externally fed references.

The APPH supports many other functions including

- Absolute and residual phase noise measurements
- Amplitude noise measurements
- Pulsed absolute and residual phase noise measurements
- Two-channel 100 MHz FFT analysis
- Transient measurements (frequency, phase, amplitude vs. time)
- Spectrum analysis
- Frequency counter function / power meter

Additionally, the unit offers

- Two programmable low noise DC supplies up to 15 V and 550 mA current capability
- Three low noise tuning voltages for -5 to +20 V voltage range

It is a compact and powerful instrument available with LAN (VXI-11), USBTMC, or with GPIB (optionally) interfaces. Platform independent intuitive graphical user interface (GUI), API library, and powerful SCPI command language set is available.

Operated with an external 24 V DC supply, it consumes less than 70 W.

SPECIFICATIONS

Absolute Phase Noise Measurement 1 MHz to 40 GHz (continuous waveform)

Measurement parameters:
- SSB Phase Noise [dBc/Hz]
- Spurious Noise [dBc]
- Integrated RMS Phase Noise Deviation [deg, rad]
- Time Jitter [s]
- Residual FM/PM [Hz RMS]

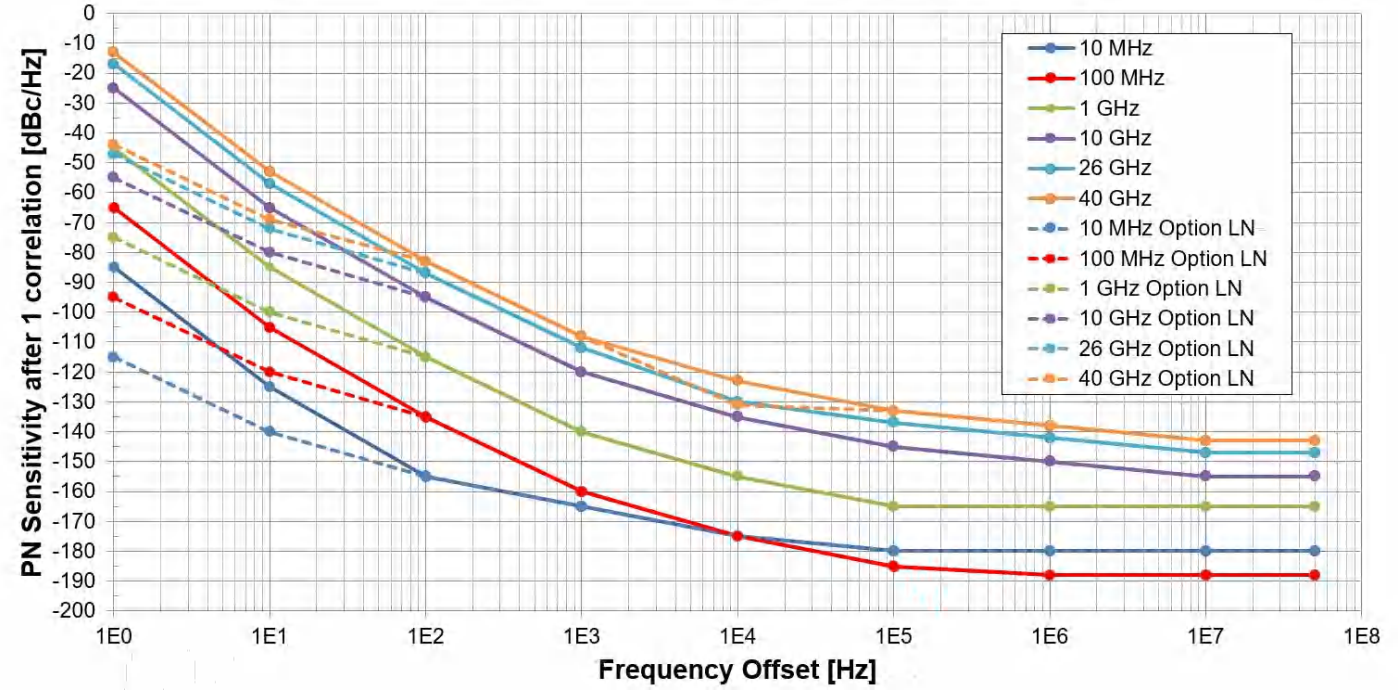
PERFORMANCE CURVES

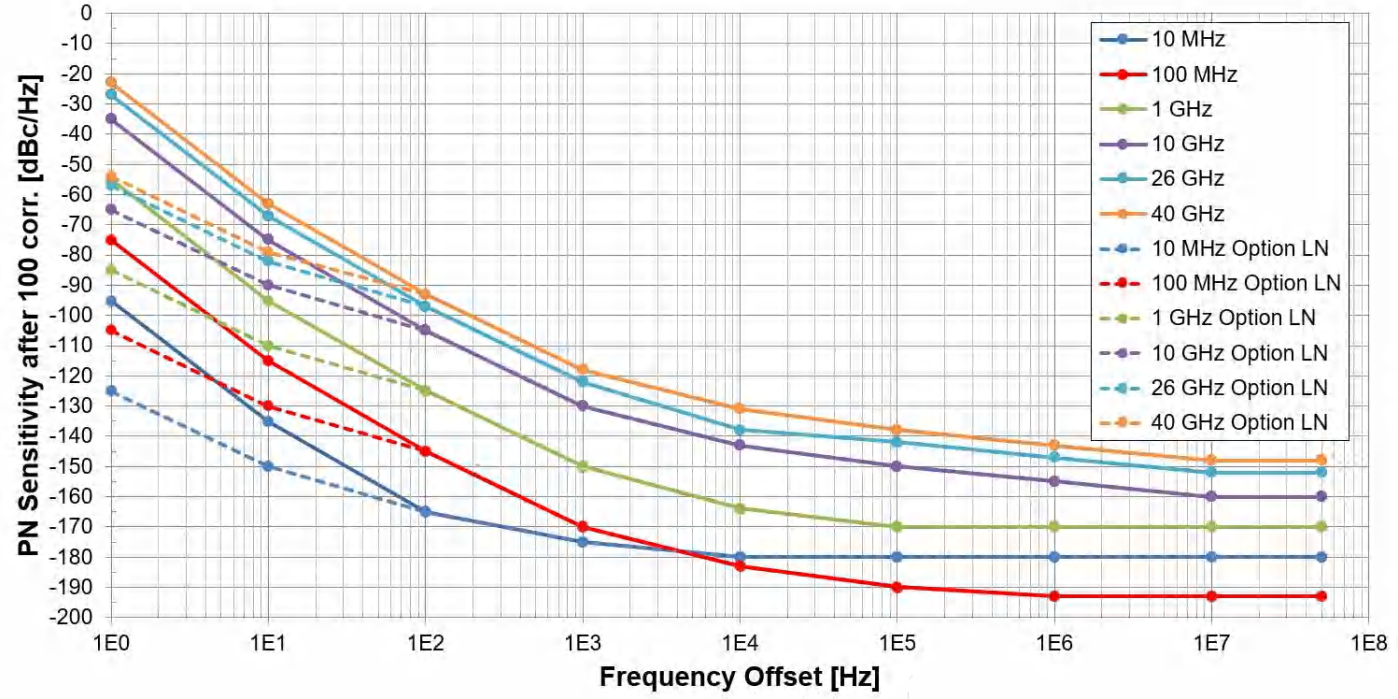
Phase Noise Sensitivity - Standard and Low Noise (Option LN) Internal References

Measurement Time ~10 seconds, after first cross-correlation; further correlations will improve sensitivity by 5 dB for 10, 10 dB for 100, and 15 dB for 1000 correlations performed. The plots show typical performance. Thermal noise (-177 dBm/Hz PM) can limit the measurement as well for low input power levels (<10 dBm).

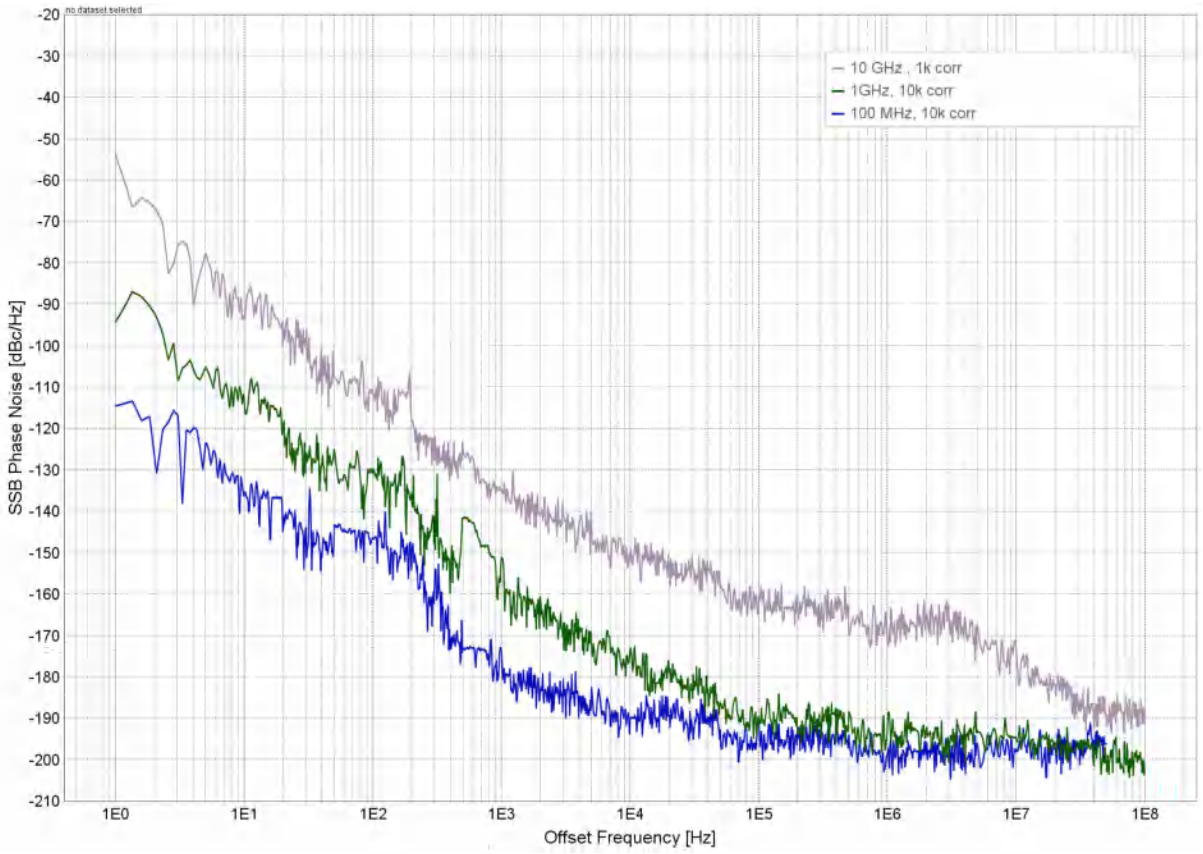
After 1 Correlation



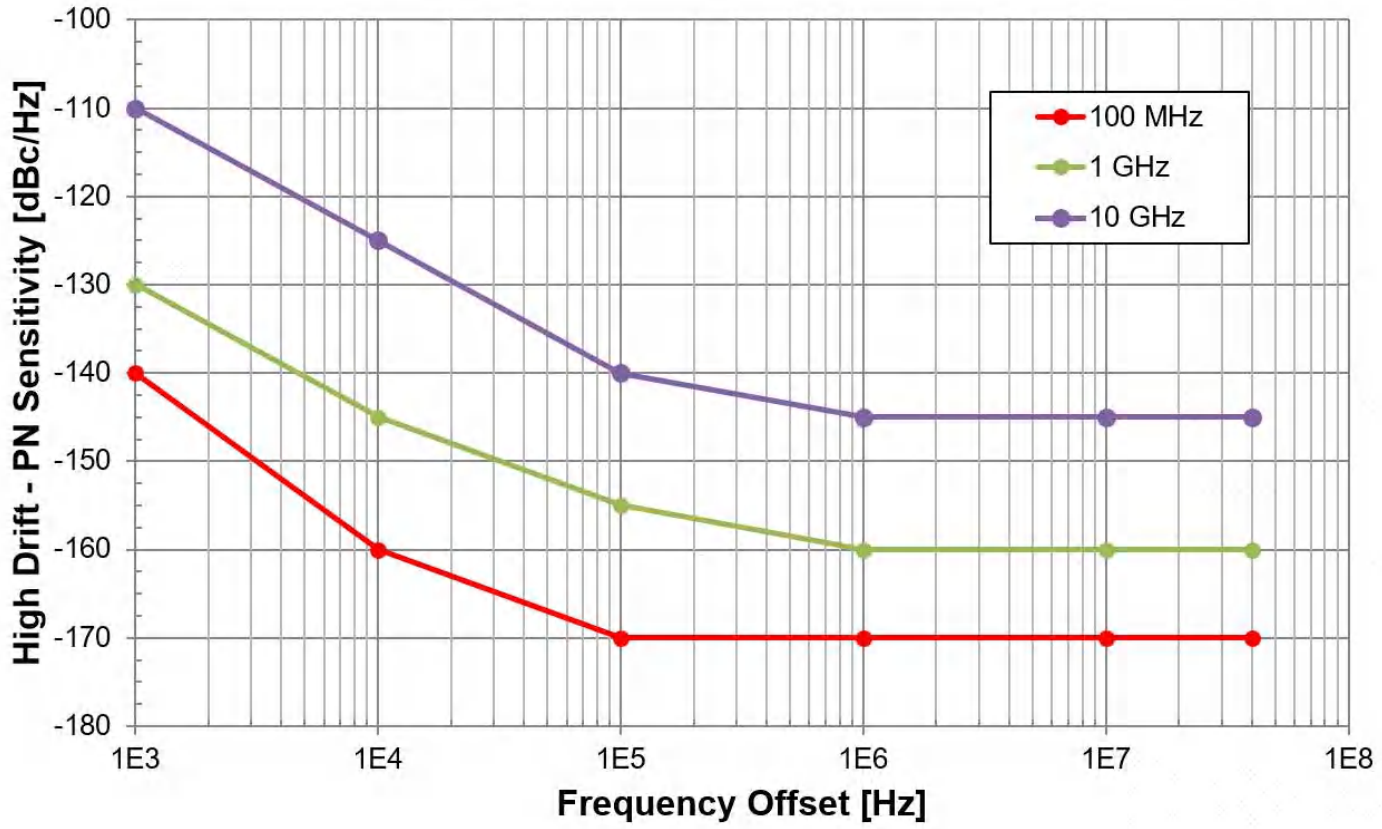
After 100 Correlations



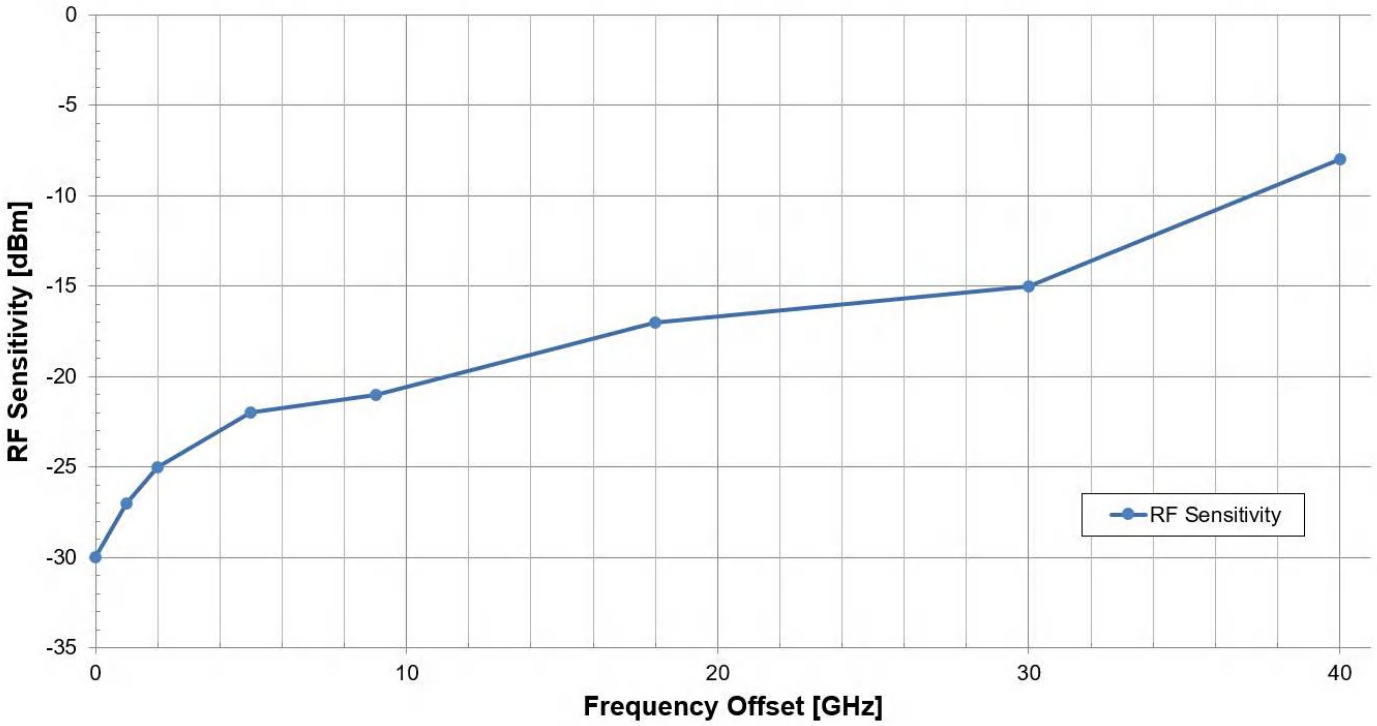
Typical Noisefloor Example (after >1k correlations at 100MHz, 1GHz, 10GHz)



Phase Noise Sensitivity - High Drift



Typical RF Sensitivity 5 MHz to 40 GHz (blue trace, in dBm)



Phase Noise Measurement Time

Total measurement time consists of setup time, transfer time plus the number of performed correlations times the time per correlation. The measurement times below are normalized to one correlation for nominal RBW settings per correlation and measurement times > 2 seconds.

	TIME PER CORRELATIONS	DEFAULT NR. OF POINTS (SETTABLE)
0.1 Hz to 100 MHz	80	250 per decade
1 Hz to 100 MHz	8	250 per decade
10 Hz to 100 MHz	0.8	250 per decade
100 Hz to 100 MHz	0.1	250 per decade
1 kHz to 100 MHz	0.01	250 per decade
10 kHz to 100 MHz	< 0.004	250 per decade

GENERAL CHARACTERISTICS

Remote programming interfaces:
Ethernet 100BaseT LAN interface
USB 2.0 device
GPIB (IEEE-488.2,1987) with listen and talk (Option GPIB)
Control Language SCPI Version 1999.0

Power requirements: 24V ± 3.0 VDC; 70 W maximum

Mains adapter supplied: 100-240 VAC in / 24 V 4.0 A DC out

Environmental: Levels similar to MIL-PRF-28800F Class 3/4

CE **notice**
Safety / EMC complies with applicable Safety and EMC regulations and directives.

Weight: ≤ 10.0 kg (21 lbs) net

Dimensions:
incl. rubber: 154 mm H x 467.5 mm W x 342 mm L (6.1 in H x 18.4 in W x 13.5 in L)
with handle: 154 mm H x 520 mm W x 342 mm L (6.1 in H x 20.5 in W x 13.5 in L)
handle: radius 230mm (9 in); can be turned 360° in 30° steps
