

Anritsu Advancing beyond

New Radio RF Conformance Test System ME7873NR

A night landscape featuring a starry sky with a prominent aurora borealis in shades of green and blue. In the foreground, a small cabin with two glowing windows sits on a dark, grassy hillside. The overall scene is serene and evokes a sense of vastness and exploration.

Let's go to see the scenery of 5G.

GCF/PTCRB Approved Conformance Test Platform

Proven System that Supported
3G and 4G era.

3G, 4G, and... now 5G

3G

ME7873F

The globalized mobile 3G and 4G market depends increasingly on conformance tests to assure reliable interoperability.

With its support for both W-CDMA and LTE mobiles, the ME7873F/L/LA series is a trusted conformance test system offering reliable results to many Anritsu customers worldwide.

The world-beating early release of the New Radio RF Conformance Test System ME7873NR inherits the same design concept as its predecessor ME7873 series while extending support to 5G RF/RRM tests.

The ME7873NR are based on the latest 3GPP communications standards and supporting both the FR1 and the FR2 bands. Moreover, it has many built-in functions for R&D testing.

4G

ME7873LA

5G

New Radio RF Conformance Test System

ME7873NR

Easy-to-use

The intuitive easy-to-use GUI supports simple creation and editing of test sequences, system environment settings, and changes to parameters for mobile-device settings and test cases.

Moreover, automatic extraction of Fail test items, and Retry and Log display functions, etc., not only support compliance testing but also help increase R&D efficiency.

Stability and Reliability

Both basic correction at installation and automatic correction at measurement execution are supported.

Stable and reliable measurements with high reproducibility are obtained by eliminating temperature-change-related measurement system variability.

Expandability

Hardware can be configured flexibly to match executed test cases and can easily be upgraded to higher-order CA/MIMO specifications.

New Radio RF Conformance Test System ME7873NR Features

Pioneered 5G NR RF/RRM Conformance Test System

Pioneering for GCF*/PTCRB**2 5G Validation

The New Radio RF Conformance Test System ME7873NR test platform is GCF/PTCRB certified. After its market-leading*3 release in November 2018, it became the first system to start GCF certification for 5G tests in January 2019 and subsequently started PTCRB certification tests in February. Since then, the number of supported test cases has been increasing at each quarterly GCF/PTC RB meeting.

The ME7873NR executes 5G NR Standalone and Non-Standalone mode RF/RRM tests with various types of measuring equipment and dedicated test software when used with the Radio Communication Test Station MT8000A simulating a 5G NR base station and the Signalling Tester MD8430A simulating an LTE base station.

*1: GCF (Global Certification Forum):

Certifies conformance to standards for mobile terminals and test systems. Composed mainly of operators, mobile terminal vendors and chipset vendors and performs certification for frequency bands used in Europe.

**2: PTCRB (PCS Type Certification Review Board):

A similar test system certification organization to GCF composed mainly of N. American carriers and UE vendors and performing conformance certification for frequency bands used in N. America.

*3: According to our research result on the news releases of each company.

Supports Latest 3GPP Standards

It supports execution of 3GPP-compliant 5G mobile RF TRx and RRM performance tests in accordance with the latest 3GPP standards updated every 3 months. Supported test standards are 3GPP TS 38.521-1C Part 6 (Transmitter Characteristics), Part 7 (Receiver Characteristics), 3GPP TS 38.521-3 Part 6 (Transmitter Characteristics), Part 7 (Receiver Characteristics), 3GPP TS 38.521-4 Parts 5/7 (Demodulation Performance Requirements), Parts 6/8 (CSI Reporting Requirements), as well as 3GPP TS 38.533 Part 4 (EN-DC with PSCell in FR1), Part 5 (EN-DC with at least one NR cell in FR2), and Part 6 (NR standalone in FR1).

Supports Carrier Acceptance Tests

In addition to 3GPP RF/RRM Conformance Tests, North-American carrier acceptance tests are also supported, offering a wider application range with the same platform.

Easy Upgrade from ME7873LA

A cost-effective easy upgrade to the ME7873NR from the LTE-Advanced RF Conformance Test System ME7873LA**4 is readily available by adding the minimum required hardware. Upgrading to the ME7873NR not only adds 5G NR test items but also keeps support for the ME7873LA test items too.

**4: LTE-Advanced RF Conformance Test System ME7873LA:

Platform supporting tests of 3GPP LTE/LTE-Advanced terminal RF TRx characteristics with certified compliance with 3GPP standards, such as performance. Supports acceptance tests by N. American operators in addition to LTE-Advanced Pro test items, such as LAA and CAT-M/NB-IoT.

Supports Global Mobile Terminals

In addition to supporting GCF/PTCRB-certified bands (5G NR bands and LTE bands in 5G NSA mode) now being deployed or expected to be deployed in North America, Europe, and Asia, 3GPP-defined FR1 and FR2 bands are also widely supported. Currently supported bands are shown below. Currently unsupported bands are expected to be supported one-by-one according to market demand.

Please consult our business section for more details.

[NR Band]

Operating Band	UL Frequencies (MHz)	DL Frequencies (MHz)
FR1		
n1	1920 to 1980	2110 to 2170
n2	1850 to 1910	1930 to 1990

New Radio RF Conformance Test System ME7873NR Features

Easy Hardware Configuration Supporting Required Test Items

The hardware can be configured easily to support required test items. Consequently, the customer's test environment can be supported at minimum equipment cost. In particular, the Lite Model released in June 2023 supports the RF TRx performance test using one MT8000A (Radio Communication Test Station).

ME7873NR Lite Model Features

Unlike the Rack Models, the ME7873NR Lite Model is an all-in-one tester, offering an ideal test environment for efficient testing.

FR1 Lite Model	FR1 Rack Model	FR2 Rack Model
		
ME7873NR-008	ME7873NR-001	ME7873NR-009

Optimum Cost Performance

In comparison to the predecessor Rack Models, the Lite Model has stronger test performance at a reasonable price as a result of cutting the number of test items. In addition to new purchases, an upgrade path for customers who already own the MT8000A, plus an upgrade path to the Rack Models helps customers optimize investment cost-performance.

20% Shorter Measurement Times

Measurement times are about 20% faster than the predecessor Rack Models due to simplified hardware.

Compatible Interface

Keeping the same interfaces as the previous Rack Models keeps existing customers familiar with test operations.

Capability Comparison with Rack Model

	Lite Model	Rack Model
		
Freq. Range	450 MHz to 6 GHz	450 MHz to 7.125 GHz*
Test Items	TS 38.521-1 (In-band) TS 38.521-3 (In-band)	TS 38.521-1 TS 38.521-3 TS 38.521-4 TS 38.533
NR CA	Single Carrier (EN-DC) 2CA (SA)	Up to 4CA and more*

*: Number of system racks and hardware configuration depends on support range.

Focus on Improving Test Efficiency, Measurement Stability and Reliability

Easy Control of External Devices

The system software has built-in functions for controlling the DC power supply* and temperature chamber* in the same way as selecting test items. Using these standard functions makes automation easy.

*: Users must provide the DC power supply and temperature chamber. Refer to the ordering information for recommended models.

Improve Reliability using Correction Function

System measurement stability and reliability are improved by the following three calibration and correction methods:

- Basic calibration at acceptance inspection
- Auto-calibration at work start
- Individual measurement correction

Individual measurement correction immediately before measurement eliminates temperature-related drift and greatly improves the reliability of measurements.

In addition, Anritsu engineers perform basic calibration when installing the system at acceptance inspection, eliminating the need for operators to perform this complex calibration and correction work.

Detailed Support System

An Anritsu Support Service contract keeps the system operating at peak performance, maximizing return on investment, minimizing downtime, and keeping work on schedule.

- Latest software updates matching the latest changes to the 3GPP standards
- Information on 3GPP trends, consultation and technical support for troubleshooting test problems
- Free hardware repair and maintenance with a back-up loan unit

New Radio RF Conformance Test System ME7873NR Functions

Convenient Functions for Wide Range of Applications

Easy-to-use Main Screen for Key Operations

The screen toolbar icons for key operations are easy to understand. Operations are performed using the Toolbar at the top of the Main window using easy-to-understand icons. In addition, test sequence items and execution status are displayed at the left side of the Main window.

Main Window

Check Measurement Progress

The current measurement progress is easily confirmed because the Radio Communication Test Station MT8000A displays real-time logs during measurement. In addition, failed results are easily seen from the message exchanges between the tester and mobile sides, supporting easy problem troubleshooting.

Real-time Trace Log Display

Easy Sequence Creation and Editing

The creation and editing procedure is as easy as selecting the test case to measure from the task pane (below) and clicking [Insert] to create the sequence. Select the created test case and double click [Schedule] at the screen bottom left to display detailed parameters. The measurement frequency and channel bandwidth can be changed here too.

Sequence Creation Screen

Parameter Changing Screen

New Radio RF Conformance Test System ME7873NR Functions

Convenient Functions for Wide Range of Applications (continued)

Measurement Log Analysis

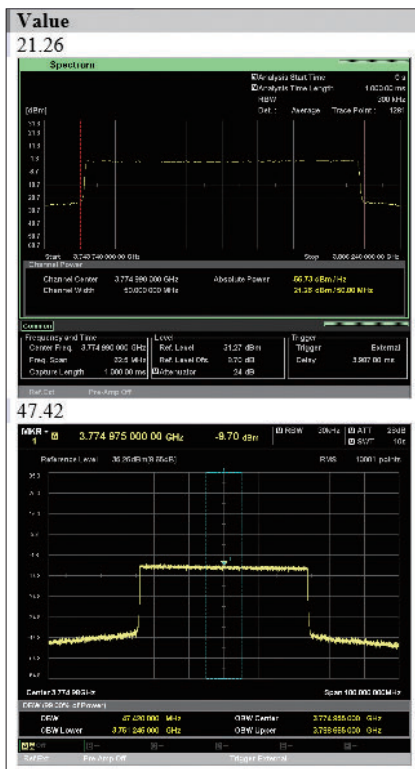

MT8000A measurement logs are saved automatically for detailed checking and troubleshooting with standard log viewer software.

Trace Log Viewer Display

Measured Data Management

Measurement results are confirmed at the Measurement Result screen and saved either as HTML for easy confirmation or as XML/CSV for easy database management. Moreover, HTML report files are linked to the signalling logs for each measurement, cutting search times for required information.

Measurement Report (HTML)

Specifications

New Radio RF Conformance Test System ME7873NR

FR1 Configuration

Input and Output connector	N-type, 50Ω	
Max. Input Level	+35 dBm	
Reference Oscillator	MS2692A as standard External oscillator signal input available (Frequency: 10 MHz, Connector: BNC)	
Frequency Range	450 MHz to 6 GHz	
Temperature Range	15°C to 35°C (operating), 0°C to 50°C (storage)*1	
Power Supply (Rating)	Select either 100 VAC to 120 VAC or 200 VAC to 240 VAC, 50 Hz/60 Hz ≤7950 VA*2 (Full system configuration)	
Dimensions	2 racks configuration 1140 (W) × 1980 (H) × 797 (D) mm*3 3 racks configuration 1710 (W) × 1980 (H) × 797 (D) mm*3 (Full system configuration)	
Mass	≤830 kg*4 (Full system configuration)	
CE	EMC	2014/30/EU, EN61326-1, EN61000-3-2
	LVD	2014/35/EU, EN61010-1
	RoHS	2011/65/EU, (EU) 2015/863, EN IEC 63000: 2018
UKCA	EMC	S.I. 2016 No.1091, EN 61326-1, EN61000-3-2
	LVD	S.I. 2016 No.1101, EN 61010-1
	RoHS	S.I. 2012 No.3032, EN IEC 63000:2018

FR2 Configuration

Reference Oscillator	MS2840A/MS2850A as standard External oscillator signal input available (Frequency: 10 MHz, Connector: BNC)	
Frequency Range	450 MHz to 6 GHz (LTE Anchor) 24.25 GHz to 29.5 GHz, 37 GHz to 43.5 GHz	
Temperature Range	15°C to 30°C (operating), 0°C to 50°C (storage)*1	
Power Supply (Rating)	Select either 100 VAC to 120 VAC or 200 VAC to 240 VAC, 50 Hz/60 Hz ≤11000 VA*2 (Full system configuration)	
Dimensions	OTA Chamber part 2200 (W) × 1980 (H) × 1200 (D) mm (MA8172A) 2700 (W) × 1980 (H) × 1500 (D) mm (MA8172B) System rack part 570 (W) × 1980 (H) × 797 (D) mm*3	
Mass	≤1600 kg*4 (Total of system rack part and OTA Chamber part)	
CE	EMC	2014/30/EU, EN61326-1, EN61000-3-2
	LVD	2014/35/EU, EN61010-1
	RoHS	2011/65/EU, (EU) 2015/863, EN IEC 63000: 2018
UKCA	EMC	S.I. 2016 No.1091, EN 61326-1, EN61000-3-2
	LVD	S.I. 2016 No.1101, EN 61010-1
	RoHS	S.I. 2012 No.3032, EN IEC 63000:2018

Key specifications are listed. Contact your sales representative for details.

- *1: Ambient temperature
Basic calibration at acceptance inspection must meet this requirement.
Use in air-conditioned room recommended for stable measurement.
- *2: Power consumption
Sufficient power (600 VA) for basic calibration at acceptance inspection as well as for ME7873NR must be supplied.
- *3: Topple prevention
Secure using hooks at rack top recommended.
- *4: Mass/Floor Loads
The installation location must be able to safely bear the above floor loads plus 100 kg for basic calibration equipment at acceptance inspection.

Supported Test Standards

The system design is based on the following standards:

- 3GPP TS 36.521-1
NR User Equipment (UE) conformance specification Radio transmission and reception Part 1: Range 1 Standalone
- 3GPP TS 36.521-3
NR User Equipment (UE) conformance specification Radio transmission and reception Part 3: Range 1 and Range 2 Interworking operation with other radios
- 3GPP TS 38.521-4
NR User Equipment (UE) conformance specification Radio transmission and reception Part 4: Performance requirements
- 3GPP TS 38.533
NR User Equipment (UE) conformance specification Radio Resource Management (RRM)

Contact your sales representative for detailed of the supported test standards and versions.

New Radio RF Conformance Test System ME7873NR Ordering Information

Please specify the model/order number, name and quantity when ordering.

The names listed in the chart below are Order Names. The actual name of the item may differ from the Order Name.

New Radio RF Conformance Test System ME7873NR Ordering Information

In addition to the above-described accessories, the following items are required to use the ME7873NR.

DC Power Supply

One of the following models is required when controlling the power supply using the ME7873NR.

Model	Name	pcs	Manufacturer
N6700C	Main frame	1	Keysight Technologies Inc.
N6732B	8 V, 6.25 A, 50 W DC Power Module*1	4	
N6709C	Low-Profile MPS Mainframe Rack Mount Kit	1	
2306-PJ	Dual-Channel Battery/Charger Simulator with 500 mA Range	2*2	Keithley Instruments Inc.

*1: Up to four modules are required according to connected mobiles.

Filler Panel Kit N6708A is required if the number of DC power modules are less than four.

At rack mounting, the maximum current is 2 A. To draw more than 2 A of current, use a separate cable to supply DC to the terminal. However, since this will prevent rack mounting, decide on the installation location for the DC power supply in advance.

When using other DC power module, ask the power supply manufacturer for details.

*2: Two sets of the 2306-PJ are required when testing up to four mobiles continuously.

Temperature Chamber

One of the following equipments is required to control the temperature chamber from the ME7873NR.

Model	Name	Manufacturer
SH-241*3	Temperature & Humidity Chamber	ESPEC Corp.
SH-242*3		
105*3	Benchtop Temperature Chamber	TestEquity LLC
107*3		
115*3	Temperature Chamber	

*3: GPIB Cable (Double-Shield, 2 m) is required to control this chamber automatically.
